

Terminal Management TMX Automation Software

Terminal Management TMX software streamlines business management by efficiently controlling transactional data and providing accurate information. This powerful front-end software package manages sales and receipt information for local and remote bulk facilities to provide the following benefits:

- Real-time order entry, inventory, receipt and report viewing, etc. allow for easy business management
- Integration with over 40 ERP and agronomy systems streamlines data input and billing while avoiding dual data entry errors
- Multiple users may log in and access the system simultaneously for flexibility
- Customizable user access to prevent users from accessing private information or from accidentally changing information
- Flexibility to work with multiple interfaces simultaneously to ensure that only the right information is exchanged for total accuracy
- Web page application for easy remote access from any smart device

Terminal Management TMX software features five different modules that precisely fit your current needs and adapt as your business grows.
